

## Koro-Trans™

### Cleaning Flooring and Step Treads

Use Crystal Simple Green to clean Koro-Trans flooring and step treads. The product is an industrial strength version of the household cleaner Simple Green. It is biodegradable and non-toxic and can be used full strength, or diluted as much as 10 to 1. The product relies on a chemical process known as material particle fractionalization. Soaking soiled surfaces allows maximum cleaning benefit. **Do not use floor wax, Armor-All type products, or solvent-based cleaning agents on flooring or step treads.** Use of solvent-based products will permanently stain Koro-Trans flooring and step treads.

#### Flooring:

1. Sweep out loose debris.
2. Mix cleaning solution with a concentration that suits the severity of the cleaning requirement. Suitable concentrations range from 1 part cleaner to 5 parts water up to a 1:1 concentration. Use full strength on tough stains.
3. Mop flooring, ringing out mop frequently. If excessive dirt and grime are present, leave flooring surfaces wet to soak.
4. Remove remaining dirt and grime with a rag using full strength cleaner in a squirt bottle. The cleaner will remove small quantities of adhesive, caulk and sealant. Spray the area to be cleaned. Allow the area to soak for 60-90 seconds, or as long as is convenient and wipe.

#### Step Treads:

1. Apply solution to the step treads to be cleaned. Allow step treads to soak and then use a stiff polymer bristle brush with a circular motion to remove dirt. Rinse step tread area with a mop or wet rag. Repeat if needed.
